Help

Rule Type

Select the type of firewall rule to create.

Steps:

- ☒ Rule Type
- ☒ Protocol and Ports
- ☐ Action
- ☐ Profile
- ☐ Name

What type of rule would you like to create?

☐ **Program**

Rule that controls connections for a program.

☒ **Port**

Rule that controls connections for a TCP or UDP port.

☐ **Predefined:**

AllJoyn Router

Rule that controls connections for a Windows experience.

☐ **Custom**

Custom rule.

Protocol and Ports

Specify the protocols and ports to which this rule applies.

Steps:

- Rule Type
- Protocol and Ports
- Action
- Profile
- Name

Does this rule apply to TCP or UDP?

☒ **TCP**

☐ **UDP**

Does this rule apply to all local ports or specific local ports?

☐ **All local ports**

☒ **Specific local ports:**

Example: 80, 443, 5000-5010

< Back

Next >

Cancel

Action

Specify the action to be taken when a connection matches the conditions specified in the rule.

Steps:

- Rule Type
- Protocol and Ports
- Action
- Profile
- Name

What action should be taken when a connection matches the specified conditions?

☐ **Allow the connection**

This includes connections that are protected with IPsec as well as those are not.

☐ **Allow the connection if it is secure**

This includes only connections that have been authenticated by using IPsec. Connections will be secured using the settings in IPsec properties and rules in the Connection Security Rule node.

[Customize...](#)

☒ **Block the connection**

Cancel

Profile

Specify the profiles for which this rule applies.

Steps:

- Rule Type
- Protocol and Ports
- Action
- Profile
- Name

When does this rule apply?

☒ **Domain**

Applies when a computer is connected to its corporate domain.

☒ **Private**

Applies when a computer is connected to a private network location, such as a home or work place.

☒ **Public**

Applies when a computer is connected to a public network location.

Cancel

Name

Specify the name and description of this rule.

Steps:

- Rule Type
- Protocol and Ports
- Action
- Profile
- Name**

Name:

microsoft-ds

Description (optional):

Microsoft-DS is the name given to port 445 which is used by SMB (Server Message Block). SMB is a network protocol used mainly in Windows networks for sharing resources (e.g. files or printers) over a network. It can also be used to remotely execute commands. You use it basically every time you use Windows to access a file share, a printer, or any other resource located on the network. Over time, there were a lot of vulnerabilities found in the SMB implementation of Windows, some of which allowed for execution of arbitrary commands over the network, partly without any authentication.
